Subject: Charges for Isolation and Re-energization from the Westario Power Inc. Grid

Effective January 1, 2019, Westario Power Inc. (Westario Power) will amend the charge for temporarily isolating and re-energizing electrical service so that electricians can safely upgrade services, perform maintenance and/or complete repair work at the request of a Westario Power customer.

These charges will offset the cost Westario Power incurs to isolate and re-energize the service.

Starting January 1, 2019, the estimated cost for isolation and re-energization of service will be as follows:

Standard isolation and re-energization of service at the meter, pole or padmount transformer – normal working hours	\$285.00*
Standard isolation and re-energization of service at the meter, pole or padmount transformer – after hours, evenings and weekends	\$570.00*
Isolation <u>or</u> re-energization of service at the meter, pole or padmount transformer – normal business hours	\$142.50*
Isolation <u>or</u> re-energization of service at the meter, pole or padmount transformer – after hours, evenings and weekends	\$285.00*

* Cost may vary based on connection configurations and site conditions

Please note that only an authorized Westario Power employee or contractor can isolate or re-energize services. This includes any isolation at the meter. Westario Power must be contacted to arrange for any isolation or re-energization prior to commencement of customer work. General electrical contractors are prohibited from performing this service.

Sincerely,

**Westario Power Inc.
