Notice of Supply Chain Interruptions

Dear valued Customers/Contractors:

As you may be aware, a global shortage of electronic components has impacted a wide range of industries, electricity distribution inclusive. The length of the shortages is unknown but expected to last for an extended period, possibly another few years.

The supply chain interruptions for material and components for the electricity distribution system has created lead time delays lasting up to 50 weeks on certain items.

It is crucial to expedite planning requirements in an effort to meet your delivery expectations. By considering the delayed lead times, you will provide our procurement team appropriate time lead-times to secure your requests, increasing the likelihood of on-time delivery.

Please work closely with our *Design and Engineering* team on your upcoming requirements, together we can work through this challenging situation.
